

COURTS & JUSTICE

PRODUCT | ODYSSEY OVERVIEW

Imagine how court and justice offices would benefit from proven information management, better access to mission critical data, and faster business processing. At Tyler Technologies, we understand how courts and justice systems work—and the unique needs of the judges, clerks, officers, IT personnel and others who use and maintain these systems. Court and justice offices need a comprehensive and effective system built on the latest technology. And that's Odyssey—a Courts & Justice Solution from Tyler.

Integrating Technology, Unparalleled Access

Odyssey provides software and services to local governments across the country. From courtrooms and jails to attorneys' offices and supervision departments, Odyssey offers unparalleled access to court information through a comprehensive system. Plus, our systems provide the most advanced and reliable functionality available to simplify processes, improve workflow, and ensure efficient and consistent operations.

Built on distributed, stateless n-tier architecture, Odyssey delivers powerful scalability, extensive availability, and flexible deployment based on the latest Internet browser technology. Plus, the application is partitioned into database services, application services, Web services, and the client-side user interface. Intuitive to use and maintain, users benefit from a familiar browser look and feel. Simply stated—Odyssey provides rich functionality to help users work more efficiently.

- Supports Microsoft® SQL Server™
- Microsoft Windows® authentication
- Accommodation of LAN and remote users
- Rights and roles security model that can be run over the internal or VPN connection
- Scalability
- Network load balancing

Plus, all Odyssey product centers seamlessly integrate with many other applications—including Microsoft Word, Active Reports®, and imaging viewers—so whether users need to create a custom report or view digital information, Odyssey has it covered.

Odyssey Assistant

The client-side user interface for the Odyssey Suite of products—the Odyssey Assistant—is designed for intuitive navigation. Screens use popular Web browser conventions that users are already accustomed to in order to speed up data entry and keep screens, processes, and programs easily identifiable. The user-centric design includes:

- Title bar, menu bar, navigation menu, and product center links for easy navigation and logical workflows
- Consistent naming conventions and color schemes for intuitive navigation
- Tabs for each category of information for logical organization

The Odyssey Assistant makes for easy searching, as well as modification of case or party information, for all of the Odyssey product centers—all from one comprehensive access point.

The most comprehensive courts and justice software solution available.

ODYSSEY OVERVIEW

Odyssey Product Centers

Intuitive information access; logical organization; better communication; flexible deployment—all the best practices that courts need to run their offices more efficiently and effectively. And it's all within one comprehensive solution.

Case Manager, with a unique results-oriented approach, helps users to easily manage all aspects of court administration, including no-hassle scheduling and calendaring, events processing, financial management, and in-court minutes. Create customized, user-defined reports.

Check Manager provides court financial offices with a comprehensive system for efficiently processing hot check records by tracking, adding, and modifying defendant party and check record information. Track all hot check information—restitution, merchant, and check fees assessments; payments; and credits applied—in an electronic till for secure and easy financial management.

Financial Manger manages the entire transaction audit trail—from account management to financial transactions and check processing—without having to rely on a third-party financial application. Verify payment forms, produce a summary of financial activity, and much more. It is also fully integrated with many other Odyssey product centers so users get an overall view of their court's important information—all from one system.

Jail Manager automatically manages inmate processing, tracking, and reporting—from booking, inmate evaluation, bonds and warrants, to medical processing, personal property records and release. Individually configured for each client's facility, it also allows users to create customizable at-a-glance reports for all state-mandated reporting.

Law Enforcement allows users to do everything from track and monitor the progression of an incident; search for information on other incidents; to even maintaining multiple reporting officers, investigators, and offences. Plus, it maintains information on calls for service, civil papers, and even personnel information.

Prosecutor is designed to aid prosecuting attorneys' offices with the processing and maintaining of all hearing and trial information. Users can review, gather, and track case information including charges, case status, witnesses, victims, associates, evidence, history, and related cases. Additionally, users can track when and by whom case information was modified to ensure data accuracy.

Supervision, a comprehensive pre-trial and probation management system, handles everything from document imaging, financial management, and reporting, to supervisory functions, and Microsoft Word forms processing. Further, all case and party information is organized in an easy to search format, reducing redundant, missing, and inaccurate information.

Index comprehensively organizes and stores detailed information on all firearm permits and marriage licenses and applications, and makes application processing easy.

Public Access provides staff and citizens with easy access to public information contained within the Odyssey Suite of products through a Web page linked directly from the court's home page. Citizens can access sheriff, criminal, and civil records—anytime and anywhere.
