Versatrans® My Stop™

Connecting schools with their communities, one stop at a time!

With My Stop, parents, guardians and students know exactly where their bus is and what time it will show up at their stop — all from a smartphone or similar mobile device. Never miss the bus again with My Stop.

What Makes My Stop Unique

My Stop is the only mobile Web browser application that knows each family and when the bus will get to each child's stop. That's because all available information comes directly from Versatrans Routing & Planning.

My Stop requires very little setup, especially for parents and guardians. Since usernames are tied to specific students, all a parent needs to do is log in, even if it is for the first time.

In a one-student household, My Stop will zoom directly to that child's bus. In the case of multiple students, the application provides parents with a choice of which student to view. Parents can retrieve the information they require in seconds from any location.

Parent Benefits

This simple, yet informative tool gives parents, guardians and students the ability to know exactly where their bus is. My Stop graphically displays the vehicle's location on a map, as well as the estimated time of arrival (ETA) to a specific student's bus stop. The vehicle's location is automatically updated every five seconds* and the ETA is recalculated to accommodate any delays due to traffic while in route.

District Benefits

My Stop helps districts increase communication by providing information to families before it is even requested. This not only raises the level of service currently provided, but also significantly reduces incoming calls to the transportation office. Never again receive phone calls from parents asking where the bus is.

*Update frequency depends on your GPS hardware and data plan

Versatrans My Stop allows parents to:

- Know where the bus is at all times

- Receive a bus's ETA at their child's stop

Versatrans® My Stop™

Features

Browser based — simply log on using a mobile Web browser through an iPad®, iPhone® or Android™ mobile device. Users can also access My Stop from any computer connected to the Internet.

Multiple map displays — quickly toggle between a Bing™ aerial map and a road map, or set the map display to "automatic" and allow My Stop to choose which map is best suited depending on the level of zoom.

Estimated Time of Arrival — see when the bus should arrive at the bus stop. ETAs are updated every five seconds to reflect traffic or other delays.

Easy to use — parents/guardians log on with their e-Link username and password to see where the bus is and its ETA to the stop.

Multiple student households — choose a student and instantly locate their bus in a multiple-student household.

Required Solutions for the Use of My Stop

Versatrans Onscreen — My Stop is built into Onscreen, our powerful AVL system that lets dispatchers know where each vehicle is at all times. My Stop comes with Onscreen at no additional cost.

Versatrans e-Link — My Stop's user permissions are provided by e-Link, our parent portal that allows parents to look up bus stop and route information.

Versatrans Routing & Planning — My Stop's intelligence comes directly from Routing & Planning, the premiere route planning and student scheduling tool. Because of the foundation that Routing & Planning provides, there is practically zero set up required by the parent or guardian.

GPS Hardware — Vehicles must be outfitted with GPS units that continuously transmit data. While our software accepts data from the leading GPS hardware providers, the use of Tyler Telematic GPS hardware provides the best overall GPS and transportation management experience.
