

Odyssey[®] Financial Manager

Balance and Control Your Accounting System

Transform your complex financial processes and daily tasks into a centralized and streamlined financial management system with Odyssey[®] Financial Manager. Designed with courts in mind, this robust and integrated application manages your back office financial needs through a dynamic dashboard that can be customized based on your specific needs — regardless of the nature of the transaction or payment. Financial Manager enables users to track accounts, process finances and manage transactions securely and efficiently.

Seamless Integration

Odyssey Financial Manager is completely integrated with the Odyssey product suite — including Odyssey Case Manager, Odyssey Jail Manager, Odyssey Check Manager, Odyssey Supervision and Odyssey Index. This seamless integration streamlines the flow of data between applications and processing functions, resulting in increased information accessibility and reduced data entry redundancy. Integration with Odyssey Case Manager and Odyssey Supervision enables users to access an overall view of their court's chart of accounts, streamline bank deposits and check exports, as well as pass check number information back to Case Manager. Also, integration with Odyssey Case Manager's financial transactions allow users to access a bird's-eye view of their court's chart of accounts, bank deposits and check exports. Odyssey Financial Manager controls the entire transaction audit trail without having to rely on a third-party financial application.

Advanced Capabilities

Via Odyssey's integrated platform and powerful capabilities, financial and demographic information is automatically populated into the system, eliminating redundant data entry and reducing human error. Every interested party receives instant, real-time access to critical financial data without sacrificing security. However, access to information is still subject to whatever restrictions or controls your organization configures in the system.

Odyssey Financial Manager's powerful capabilities allow users to effectively:

- Take control of restitution fees, fines/citations and any other user-defined court costs
- Verify payments, adjust fees and generate customized receipts
- Produce a summary of financial activity in customizable reports, such as bank reconciliation reporting and a complete audit trail of all financial activity
- Generate a detailed account balance for one or more court locations

With Odyssey Financial Manager, it's easy to centralize disparate financial transactions that may involve different Odyssey applications, personnel, courtrooms, offices or general ledgers. Financial Manager streamlines processing functions, giving users complete control with a thorough overview of all court financial transactions.

Odyssey Financial Manager Benefits

- Centralize complex court financial transactions
- Customize reports for a comprehensive financial outlook
- Streamline financial management
- Eliminate redundant data entry
- Create back office efficiencies
- Gain access to and share critical financial data

Odyssey® Financial Manager

Increase Transparency and Optimize Processes

Odyssey Financial Manager provides a simplified tool for maintaining a transparent and auditable view of cash, asset and liabilities accounts, as well as provides a built-in check queue for automated disbursements.

Users can easily create a complete chart of accounts either for a single jurisdiction or for multiple jurisdictions. In larger installations, an individual location's accounts can be designed to roll up to area, regional or statewide views for a comprehensive financial outlook. Users can interactively explore transactions by drilling down into charts of accounts.

Financial Manager manages the process around check printing queues. As disbursement requests are produced in the various business operations (Odyssey Case Manager, Odyssey Jail Manager and Odyssey Supervision), checks are placed in a queue, ready for approval and printing. Queues can be managed separately at each location or centrally.

Powerful Reporting

Odyssey Financial Manager not only offers comprehensive account management functions for viewing and managing financial transactions, but also includes a variety of customizable reports, so that data can be organized into many easily-deciphered formats. Account reports are used to produce a summary of financial activity or generate a detailed account balance for one or more locations. Users can even create a report of account transactions from the transaction register. Using Odyssey Financial Manager, courts can also verify payment forms and track accounts. Data entry is quick and easy, and financial information is always current.
